

SCANDA®. The best start for your lambs is the smart choice for your whole drenching programme.

Results from the recent national drench survey confirmed that BZ and levamisole combinations such as SCANDA are still effective on 92% of sheep farms.¹

SCANDA is your first choice to get lambs off to a good start. The low-dose formulation reduces the effect of rumen bypass in young lambs to ensure greater effectiveness of the drench, plus there is the convenience of more doses per pack.

As a short-acting combination SCANDA is recommended where there is a history of single active drench use and concern about drench resistance.

Choose SCANDA for your routine drenching programme in lambs.

SCANDA: Smart Choice.
