

# LICENCE TO KILL

## Technology so advanced it leaves everything else for dead.

Because lice problems build up over time the only sure way to control lice is to treat every year.

MAGNUM® has advanced IGR technology that provides effective lice control for at least 20 weeks (including SP resistant strains). As the only water-based IGR for lice, MAGNUM delivers more advantages than any other lice product. The water-based solution means no solvents, making it user-friendly for you and your equipment. Plus it has a nil meat withholding period.

MAGNUM is the ideal pre-lamb lice treatment as it is the only lice product with a 3 week quarantine period. It's also rainfast so you can use on wet sheep and it contains a purple dye for easy identification of treated stock.

Whenever there's a lice problem, make sure you have it covered with MAGNUM.

**MAGNUM®: The superior solution to lice control.**
