

# THE NEW WAY TO OUTSMART WORMS FOR YOUR CATTLE.

Leaders in  
**SMART  
DRENCHING**

**NEW**

The power of an endectocide with  
the smarts of a combination.

Successful farming means keeping one step ahead of any threats to your productivity. As worms become increasingly resistant, you need smarter ways to combat them, improve production and keep drench resistance at bay.

Introducing CONVERGE – a brand new short-acting dual combination that's a smart alternative to your current drench.

CONVERGE is an abamectin/levamisole (endectocide/clear) combination that gives you even more power over worms:

**Now, with new CONVERGE, you have a smart alternative to stay one step ahead of worms and keep them guessing.**

- If you're using an endectocide(ML), CONVERGE is an ideal way to keep the benefits of this important drench family and delay resistance.
  - The two actives provide a potent combination – abamectin is the active of choice against *Ostertagia*, and levamisole is highly effective against endectocide-resistant *Cooperia*.
- Short-acting combinations have always been the smart choice to improve production and delay resistance.

Registered pursuant to the ACVM Act 1997, No A10119. CONVERGE is a trademark of Schering-Plough Animal Health Limited.
