DRENCHING**

The Smart Alternative

Successful farming means keeping one step ahead of any threats to your productivity. As worms become increasingly resistant, you need smarter ways to combat them, improve production and keep drench resistance at bay.

Introducing CONVERGE – a brand new short-acting dual combination that's a smart alternative to your current drench. CONVERGE is an abamectin/levamisole (ML/clear) combination that gives you even more power over worms:

- If you're currently using a BZ/levamisole combination, alternating with CONVERGE this season will help keep you one step ahead of the worms.
- And if you're using an ML, CONVERGE is an ideal way to keep the benefits of this important drench family and delay resistance. CONVERGE's low-dose formulation makes it ideal for ewes and lambs. And as an added advantage, you can use CONVERGE for cattle, too.

With new CONVERGE, you have a smart alternative to stay one step ahead of worms and keep them guessing.
